Lab Manual

Name: Sushmita Nandani Enrolment No:

92400103339

Class: 5EC2

Batch:A

INDEX

Lab	Program	CO	Date	Marks				Total	Signature
				R1(4)	R2(2)	R3(2)	R4(2)	(10)	
1.	Develop Student Admission Management Module using OOP Concepts (Class, Object, Constructor, Access Modifiers).	CO1							
2.	Design Employee Payroll System using Inheritance, Interface & Polymorphism	CO1							
3.	Develop Expense Tracking Module with Exception Handling	CO1							
4.	Build Online Event Registration Portal using ASP.NET Controls & Validation	CO2							
5.	Develop Academic Calendar & Leave Management System using Rich Controls, Session & Cookies	CO2							
6.	Create Product Catalog Application using ASP.NET MVC Architecture. (Controllers, Models, Views, Routing)	CO3							

7.	Develop Feedback Management Module using MVC Layout, Partial View & Validation. (HTML Helpers, Validation, Layouts)	CO3							
8.	Develop Inventory Management Module using ADO.NET & CRUD Operations	CO4							

9.	Create Placement Dashboard using Data Controls & Crystal Reports	CO4							
10.	Build Student Management REST API using ASP.NET Core (Middleware, API, Project Structure)	CO5							
11.	Develop Smart Campus Service Portal – Feature Extension (Integrate MVC + Database + API)	CO1 , CO2 , CO3 , CO4 , CO5							

R1	Practical Performance
R2	Timely Submission
R3	Neatness & Documentation
R4	Uploaded on Git

Experiment 2

AIM: Design employee payroll system using Inheritance, Interface, and Polymorphism.

Source: payroll.cs

Code:

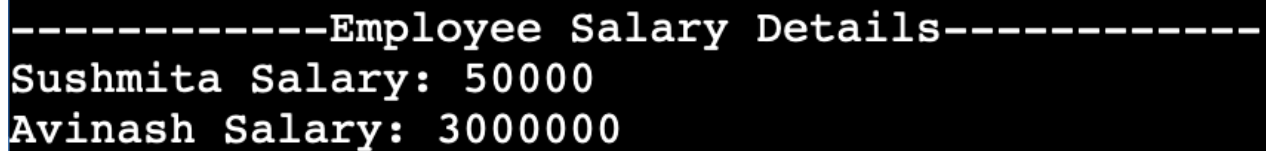

```
using System;
interface IPayroll
{
    void CalculateSalary();
}
class Employee
{
    public string Name;
    public Employee(string name)
    {
        Name = name;
    }
}
class FullTimeEmployee : Employee, IPayroll
{
    int Salary;
    public FullTimeEmployee(string name, int salary) : base(name)
    {
        Salary = salary;
    }
    public void CalculateSalary()
    {
        Console.WriteLine(Name + " Salary: " + Salary);
    }
}
class PartTimeEmployee : Employee, IPayroll
{
    int Hours;
    int Rate;
    public PartTimeEmployee(string name, int hours, int rate) : base(name)
```

```
{
    Hours = hours;
    Rate = rate;
}

public void CalculateSalary()
{
    Console.WriteLine(Name + " Salary: " + (Hours * Rate));
}
}

class Program
{
    static void Main()
    {
        Console.WriteLine("--- Displaying Payroll Information ---");
        IPayroll e1 = new FullTimeEmployee("Sushmita", 50000);
        IPayroll e2 = new PartTimeEmployee("Avinash", 20, 150000);
        e1.CalculateSalary();
        e2.CalculateSalary();
    }
}
```

Output: Screenshot:

```
-----Employee Salary Details-----
Sushmita Salary: 50000
Avinash Salary: 3000000
```
